

	SUCCESS KEY TEST SERIES X- Semi English (Unit Test- 3 Math-2 (Ch- 5, 6)) Mathematics Part - II-	DATE: _____
		TIME: 1 hrs
		MARKS: 20
	SEAT NO: _____	

Q.1 A) Choose the correct alternative.

(2)

- 1) Find the slope of the lines whose inclinations are -30°
 a. $\frac{1}{\sqrt{3}}$ b. 1 c. not defined d. $\sqrt{3}$

- 2) If θ is an acute angle of a right triangle, then the value of $\sin \theta \cos (90^\circ - \theta) + \cos \theta \sin (90^\circ - \theta)$ is
 a. 0 b. $2 \sin \theta \cos \theta$ c. 1 d. $2 \sin^2 \theta$

B) Solve the following questions. (Any one)

(2)

- 1) Angles made by the line with the positive direction of X-axis are given. Find the slope of these lines.
 90°
- 2) If $\sin \theta = \frac{15}{17}$, find the value of $\cos \theta$, (θ is an acute angle)

Q.2 A) Complete the following Activities. (Any two)

(4)

- 1) Prove that : $(\sec \theta - \cos \theta) (\cot \theta + \tan \theta) = \tan \theta \sec \theta$.

$$\text{LHS} = (\sec \theta - \cos \theta) (\cot \theta + \tan \theta)$$

$$= \left(\frac{1}{\cos \theta} - \cos \theta \right) \text{_____}$$

$$\left[\sec \theta = \frac{1}{\cos \theta}, \cot \theta = \frac{1}{\tan \theta} \right]$$

$$= \text{_____} \left(\frac{1 + \tan^2 \theta}{\tan \theta} \right)$$

$$= \left(\frac{\sin^2 \theta}{\cos \theta} \right) \left(\frac{\sec^2 \theta}{\tan \theta} \right)$$

$$\dots [\sin^2 \theta + \cos^2 \theta = 1, 1 + \tan^2 \theta = \sec^2 \theta]$$

$$= \frac{\sin^2 \theta}{\cos \theta} \times \text{_____}$$

$$\dots \left[\tan \theta = \frac{\sin \theta}{\cos \theta} \right]$$

$$= \frac{\sin^2 \theta}{\cos \theta} \times \frac{1}{\cos \theta \times \sin \theta}$$

$$= \text{_____} \times \frac{1}{\cos \theta}$$

$$= \tan \theta \times \text{_____}$$

$$\therefore \text{_____} = \text{RHS}$$

- 2) Find the coordinates of the midpoint of the line segment joining P(0,6) and Q(12,20).

$$\text{Let, } P \equiv (0, 6) \equiv (x_1, y_1),$$

$$Q \equiv (12, 20) \equiv \text{_____}$$

$$\text{Let, } R \equiv (x, y) \text{ is the midpoint of seg PQ}$$

$$\therefore \text{ By midpoint formula}$$

$$x = \frac{x_1 + x_2}{2} \\ = \frac{0 + 12}{2}$$

$$, y = \text{_____} \\ = \frac{6 + 20}{2}$$

$$\begin{aligned} &= \underline{\hspace{2cm}} & , & \quad = \underline{\hspace{2cm}} \\ \therefore x &= \underline{\hspace{2cm}} & , & \quad y = \underline{\hspace{2cm}} \\ \therefore R &\equiv \underline{\hspace{2cm}} \\ \therefore \text{The coordinates of midpoint of seg PQ are } &\underline{\hspace{2cm}} \end{aligned}$$

- 3) Angles made by the line with the positive direction of X-axis are given. Find the slope of these lines.
 45°

$$\begin{aligned} \therefore \text{Here } \theta &= 45^\circ \\ \therefore \text{slope of the line} &= \underline{\hspace{2cm}} \\ &= \tan \underline{\hspace{2cm}}^\circ \\ &= \underline{\hspace{2cm}} \end{aligned}$$

B) Solve the following questions. (Any one) (2)

- 1) A (h, -6), B (2, 3) and C (-6, k) are the co-ordinates of vertices of a triangle whose centroid is G (1, 5). Find h and k.
- 2) Find the centroids of the triangles whose vertices are given below.
 (3, - 5), (4, 3), (11, - 4)

Q.3 Solve the following questions. (Any one) (3)

- 1) If $\tan \theta = \frac{3}{4}$, then find the values of $\sec \theta$ and $\cos \theta$.
- 2) A storm broke a tree and the treetop rested on ground 20 m away from the base of the tree, making an angle of 60° with the ground. Find the height of the tree.
- 3) Find the point on the X-axis which is equidistant from A (- 3, 4) and B (1, - 4).

Q.4 Solve the following questions. (Any one) (4)

- 1) Determine whether the points are collinear.
 A (1, - 3), B (2, - 5), C (- 4, 7)
- 2) Find the equation of the line passing through the point of intersection of the line $4x + 3y + 2 = 0$ and $6x + 5y + 6 = 0$ and the point of intersection of the lines $4x - 3y - 17 = 0$ and $2x + 3y + 5 = 0$.

Q.5 Solve the following questions. (Any one) (3)

- 1) Find the coordinates of point P if P divides the line segment joining the points.
 A (-1,7) and B (4,- 3) in the ratio 2 : 3.
- 2) Show that A (-4, -7), B (- 1, 2), C (8, 5) and D (5, - 4) are the vertices of a rhombus ABCD.
